nPOD Webinar:
Using pancreas tissue slices for in situ studies of human islet cell biology

When: Wednesday, April 8th from 11am-12noon (US Eastern Daylight Time)
Where: WebEx

Join WebEx meeting
Meeting number: 730 532 225
Meeting password: diabetes
Join by phone 1-650-479-3208 Call-in toll number (US/Canada)
Access code: 730 532 225

Speaker: Dr. Stephan Speier

Information: Pancreas tissue slices are 150-200µm thick sections of living pancreatic tissue obtained from animals or humans. They enable functional analysis of intact islets in their endogenous environment and 3D morphological assessment of the endocrine and exocrine pancreas. Therefore, this approach is particularly interesting for studying autoimmune diabetes
